

Safety Policy

Document Number: MES-DOC-033
Original Approval By: Melissa DeCino
Revised By: Jade Foley

Management and Engineering Services, LLC is committed to being a leader in all activities within our community, as well as in providing products and services to our clients, regardless of where they may be located and the types of products and services provided. Our commitment goes beyond compliance and is based on a holistic approach to safety and the use of emerging technologies wherever practical. We are fully committed to ensuring that we are completely aware of and properly respond to our safety obligations. We will set safety objectives that are feasible, within the scope of the facility, and proactive both in reducing hazards and promoting employee health and wellness. To achieve our safety goals, we have implemented and will sustain a safety management system based on the international standard ISO 45001.

Our Safety Policy is a critical element of our safety management system and will be used to make decisions at all levels. Our policy will be made available to all employees, consultants, service providers, and the general public. It will be addressed in employee orientations and refresher trainings. Through our safety management system and our employees and consultants, we are committed to continual improvement of our safety management system, elimination of hazards, reduction of OH&S risks, participation and consultation from employees, the protection of our employees and visitors, and an awareness of all regulatory obligations. This policy replaces all prior safety policies as of the date of approval. We will review this policy at least annually and more often as may be necessary to ensure it is current and accurate.
